

# Database Final Presentation

John O'Brien, Kiera Gill, Roman Rychkov, Sydney Blanchard

## Needs & Approach

### Need:

The stakeholders in this project are the members of the Trentonian Room community who have been uploading and reviewing the available files, and seeking a more professional and efficient method of obtaining those files.

### Our approach:

We will be altering the format of the site in attempt to preserve the original functionality, while making the layout more intuitive. We aimed to do this in a way that the stakeholders will feel comfortable with the changes and adapt to the new system with ease.

## Benefits & Cost

### Benefits:

It is similar enough to the original site so that the stakeholders won't be confused with an entirely new layout alternative. It also provides the same functionality, with additional ease of use.

### Cost:

Our solution would replace the existing site, and would require hosting. Modifying the website's User Interface would be an easy way to conform to the owner's needs; the functionality would stay relatively the same.
